

2004 - 2005 Equipment Rental Rates Division of Equipment

FY 2004-05
Division of Equipment
INTRODUCTION TO FINANCIAL PLAN
And
DEVELOPMENT OF EQUIPMENT RENTAL RATES

The Division of Equipment (DOE) is a full cost recovery and mobile equipment service agency within the California Department of Transportation (Department). The California Streets and Highways Code, Section 140.3, authorizes DOE to operate as a rental agency. Section 140.3 specifies that the Department, with the approval of the Department of Finance (DOF), shall set rates for mobile equipment services. These rates are developed and reviewed on an annual basis, and after formal approval by DOF, are implemented on July 1st of the fiscal year for which they are developed.

The full cost recovery for mobile equipment services is achieved from these assessments or rental rates charged to the Department's Divisions for the cost of operating, maintaining and replacing the equipment in the Department's fleet.

All revenues recovered through these assessments are deposited in the Equipment Service Fund (ESF) and are available to pay for mobile equipment services.

In developing rental rates, we are continuing to be successful in keeping the costs to our customers at a competitive level, while still providing sufficient funds to cover the cost of purchasing, maintaining and repairing the Department of Transportation's fleet. This report is intended to provide Programs, Districts and Divisions with information relating to those costs and as a tool to assist in projecting their expenditures.

We are committed to continually provide high quality equipment and service to our customers.

MOBILE EQUIPMENT RENTAL RATES FY 2004-05

METHODOLOGY TO SET RATES

The Division of Equipment (DOE) in partnership with the Division of Accounting (DofA) develops the rental rates based on past year's actual cost of operating, maintaining and replacing the individual vehicle types. Data sources include the Transportation Accounting and Management System (TRAMS), the Rental Rate System (RRS), the Usage Reporting System (URS), and the Fleet Anywhere System (FA).

- 1) Each year, normally the last day of the calendar year, DOE pulls live data from the FA system to capture the count of "Active" mobile fleet in that calendar year. All mobile equipment is assigned a status code depending on the current availability or non-availability of equipment. This total count of live data, for one point in time, captures "Active" mobile fleet. This step is the first criteria for gathering prior year actual expenditures and developing the rental rates for the following fiscal year.
- 2) DofA creates a worksheet that distributes a calendar year's expenditures for mobile fleet by maintenance class. This worksheet provides the DOE with the full cost recovery detail for that calendar year, excluding items that are direct charged.
- 3) The DOE uses the historical cost worksheet from DofA to verify the total full cost recovery dollars and develop the rental rates. The three expenditures used are net depreciation, net repairs and net operating costs. These three data columns provide the total cost by each maintenance class and the total dollars needed to recover those expenses.
- 4) The DOE uses an active fleet count, live data captured at one point and time, from the FA system to set the rental rates. The data is sorted to exclude fleet assigned to DOE and other fleet not available as active rental equipment. The information is arranged by category (similar equipment). An example of similar equipment would be a compact sedan and small passenger truck. This process sets rental rates for same type equipment, as established by other rental industries.
